

Member 2 Task Sheet

Frontend Specialist (Vite-React UI, Styling & Visual Widgets)

Author: Project Lead | Date: July 26, 2026 | IEEE Hackathon

1. Core Role Focus

You own the frontend application. Your goal is to build a responsive, single-page React app (Vite + TS) featuring a visual document upload interface, dynamic timeline countdown bars, checklist panels, and chat sidebars.

2. Directories to Create and Manage

- **frontend/** Setup project packaging.
- **frontend/src/** Write React layouts and custom CSS files.
- **frontend/src/components/** Create specific dashboard components.

3. Target File Checklists & Instructions

A. **frontend/src/index.css (Day 1 - Highest Priority)**

Set primary colors: Navy (#0f172a), Slate, Amber, and Indigo. Establish global responsive grid layout style tags.

B. **frontend/src/App.tsx (Day 1 - Highest Priority)**

Assemble the primary UI sidebar, header language selectors (English/Telugu toggles), and dual-pane container panels.

C. **frontend/src/components/UploadZone.tsx (Day 2 - Highest Priority)**

Code the file upload component supporting drag-and-drop actions. Show file details and connection progress loading widgets.

D. **frontend/src/components/WorkspaceLayout.tsx (Day 2 - High Priority)**

Create split-screen panels: left pane embeds local PDF document file; right pane loads output tabs.

E. frontend/src/components/TimelineWidget.tsx (Day 3 - High Priority)

Create the milestone step timelines. Extract dates and render urgency warnings: High (Red), Medium (Orange). Calculate days remaining.

F. frontend/src/components/ChecklistWidget.tsx & ChatPanel.tsx (Day 3 - Medium Priority)

Code checkboxes and response letter textboxes. Build chatbot dialog lists displaying message bubbles and loading animation bubbles.

G. UI Polish and Language Hooks (Day 4 - Medium Priority)

Refine layout responsiveness, hover glow overlays, and glassmorphic card layouts. Wire Telugu buttons to switch language toggles globally.

4. Daily Schedule Checklist

- **Day 1:** Set up React Vite template and core visual styling rules.
- **Day 2:** Build upload zones and code workspace dual-pane container components.
- **Day 3:** Program notice timeline elements and chatbot consoles.
- **Day 4:** Apply animations, test responsiveness, and connect translation triggers.
