

Team Lead Dashboard

Project Coordination and Simplification Dashboard

Author: Project Lead | Date: July 26, 2026 | IEEE Hackathon

1. Core Management Focus

Your role as Team Lead is to keep developers aligned, check code integration daily, and prepare the presentation pitch deck. Focus heavily on project stability, database reliability, and visual demo flows.

2. Integration Coordination Checkpoints

Day 1: Platform Foundation Verification

- **Checkout:** Verify git clone setups work for all team members.
- **Ports:** Ensure backend serves a JSON health response on port 8000 and frontend Vite loads a dashboard on port 3000.
- **Database:** Confirm local SQLite nyayamitra.db database file generates automatically on backend boot.

Day 2: Multimodal Grounding Integration Check

- **Flow:** Verify uploader routes correctly send files to Gemini and return clean plain summary and date outputs.
- **Database:** Verify SQL tables are writing records upon notice uploads without throwing exceptions.

Day 3: Interactive Chatbot Check

- **Q&A Flow:** Ensure chatbot replies dynamically update based on notice contexts, and chat message history writes to SQL logs.
- **Translation:** Toggle language switches to verify Telugu translations maintain legal section details.

Day 4: Accessibility and Pitch Package

- **Accessibility:** Check browser text-to-speech audio synthesis controls, and test dynamic ICS downloads.
- **QA:** Execute backend pytests: `pytest backend/tests/` to verify zero-error state.
- **Slides:** Finalize slide deck and rehearse live demo presentation flows.

3. Core Presentation Pointers (Judges Q&A Prep)

- **Database Portability:** Highlight the SQLite default setup for instant code execution, with easy environment switch to production MySQL.
- **Tech Optimization:** Mention how native Gemini multimodal OCR replaces PaddleOCR, ensuring 100% Python 3.14 stability.
- **Social Impact:** Frame the app around societal impact: making legal notifications accessible to Telugu-speaking and illiterate citizens.
